

TOM-CAT™

*It's NEW! It's Better!
It's For YOUR Practice!
It's Your New Profit Center!*

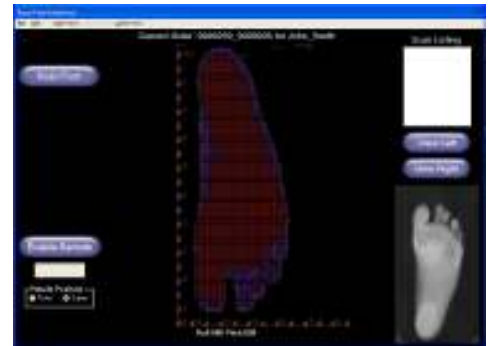

- **FAST** – Nine second scanning for time savings
- **ACCURATE** – Computer-aided digital topography
- **CLEAN** – Eliminates messy plaster and foam
- **SIMPLE** – No mailing! Data is transmitted electronically

The TOM-CAT comes completely assembled and configured for use. It includes our proprietary 3-D scanning software that allows your patients to see every contour of their feet on the included notebook computer in brilliant color. You may also print out your patient's scan on a color printer. (Use your own or we can add one as a system option.)

This simple to use easily transportable system works in both a non-weight bearing mode (best for orthotic results) and a semi-weight bearing mode for patients with special needs.

With TOM-CAT, there's no need to change your current orthotic provider. Software upgrades may be done remotely, and a hardware upgrade/trade-in program is always available. Of course, professional helpdesk support is just a phone call or email away. The computer is a closed system that can stand alone or work with your office network through either a wired or wireless connection.

Our 'best-in-the-industry' warranty includes next business day parts and upgrades for onsite technicians.

The TOM-CAT features height- adjustable scanner and computer mounts with software that is so easy to use!
